Message from the President

Glenn Walker, President, VST { walker@vsthose.com }

Dear Friends of VST:

As you may have already seen from VST's most recent announcement, we have become a carbon neutral company. However, this is not what I am going to focus upon, but rather upon VST's commitment to our distributors, Oil Companies, and employees as well as the overall environment.

Long before the "green economy," VST believed it was just good business with the commitment to recycle, reclaim, and cost reduce for our customers as well as for the economy. If you are currently a VST customer, you have already been exposed to the equipment savings in the recycled components without compromising safety and performance.

The beauty is, our business approach costs you nothing - and beginning very soon - VST will be announcing a new interactive spreadsheet that can easily be used to calculate the actual savings, not only to the environment but to your bottom line. In all, with our processor technologies used in conjunction with our forecourt equipment, the actual savings far exceed the hydrocarbon savings associated with being green.

In fact, VST has become the major player in the most regulated market in the world, California. We have accelerated our development with new products in new markets by utilizing the many years of development that we devoted to that market.

In the past number of years, VST has taken our technology advancements into other world markets with substantial fuel savings, over and above, the environmental impact to countries like Mexico with others on the horizon. In addition to the regulatory demands of the new markets, VST's product offerings provide additional savings well above and beyond the local demands, and as said, costs nothing to the industry. It is just good business for VST's customers, employees, investors, and of course the environment.

We don't just talk the talk but walk the walk. That is what we do. As someone once said, *"If you can do it; it is not bragging!"*

Thanks for listening and very soon look forward to our new interactive program that can be used to accurately calculate the actual fuel savings as well as quantifying your benefits in becoming green.

Glenn Walker

President, VST

VST Mission

To design and manufacture innovative products for retail refueling systems that are specifically engineered to protect the environment and consumers with safety and reliability.

VST Values

R: Respect
Employees,
Customers, Vendors,
and Environment
